

Bitcoin as a battery

*I have Finally installed
my Bitcoin batteries.*

What is that?

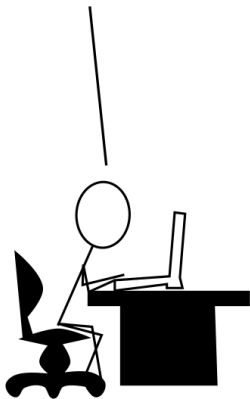

It's my invention!

*My sun cells overproduce energy
in the summer, and I consume my
energy in the winter as heating.*

*Why don't you sell your overproduction
and buy it back in the winter?*

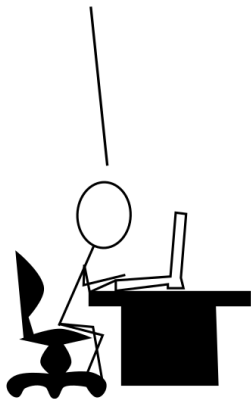

Because energy has a very low price, when you are selling it

Yea, and a very high one, when buying it back

Instead, I use my overproduction "green energy" to mine bitcoins in the summer and use them to buy "non-green energy" in the winter.

Brilliant! You should sell your idea to Elon Musk.

*He can have it For Free, but he is also
welcome to donate a Bitcoin to me.*
